Education

University of Waterloo — Waterloo, ON
Bachelor of Computer Science — *Sept. 2024 – Present*

Experience

Shopify — May. 2025 – Aug. 2025
Software Engineer Intern — *Toronto, ON*

- Increased in-store conversion and loyalty by integrating buyer profiles into point of sale, enabling personalized incentives, saving merchants **52 hours/week** by reducing checkout friction for **30% of customers**
- Developed and maintained scalable backend services using **Ruby on Rails, GraphQL, and gRPC**, enhancing performance and supporting seamless integration between Shopify core and Shop App infrastructure
- Contributed to user live lookup feature on a cross-platform **React Native** customer view app for Android/iOS, enabling faster checkout flows for repeat customers and a consistent retail experience across mobile devices

Cohere — Sept. 2024 – Aug. 2025
Senior Data Quality Specialist (Code) — *Toronto, ON*

- Improved coding abilities of large language models including **Command A**, helping achieve **86.2% on the MBPP+** and **92.6% on the RepoQA** benchmarks by providing reinforcement learning from human feedback
- Recommended optimizations and provided feedback for 275 coding tasks in Python, JavaScript, C, SQL, and C++

Projects

The Exercists — *Google Cloud Platform, Terraform, Flask, MongoDB, OpenAI API, Arduino*

- Built a physiotherapy-focused game that incentivizes proper exercise form, integrating motion tracking with a **Flask/MongoDB** backend, and deployed the system on **GCP Compute Engine** provisioned via **Terraform**

PolyPace — *Python, C#, OpenCV, MediaPipe, Unity, Blender*

- Built a first-person VR fitness game on **Meta Quest 3** that gamifies exercise, using **OpenCV** and **MediaPipe** for full body motion tracking, **Unity** for immersive gameplay, and **Blender** for 3D environments, enabling real-time activity translation and calorie tracking

Albumify - Automated album covers for Spotify playlists — *Python, JavaScript, React, SQL, CockroachDB, FastAPI*

- Developed **Albumify**, a web app that generates album covers for Spotify playlists with **React** and the **Spotify API**, backed by a FastAPI backend and a scalable **CockroachDB (PostgreSQL)** database for resilient data retrieval

Big Data Challenge Submission - Exploring the adoption of clean energy — *Python, Pandas, Scikit-learn, Matplotlib*

- Analyzed global clean energy adoption by building regression models with **Scikit-learn**, processing large datasets in **Pandas**, and visualizing patterns via **Matplotlib & GeoPandas**

GitGest - Repository commit history summarization — *Python, JavaScript, React, Flask, GitHub API, Cohere API*

- Built an AI powered tool that summarizes recent changes in order to allow developers to quickly catch up on progress in repositories, including Github OAuth integration for private and organization-specific repositories

Intellimailr - AI powered cold emailing platform (MetHacks Winner) — *Python, Bootstrap, Flask, Cohere API*

- Built Intellimailr, a **Flask** app that automates personalized cold emails by scraping contact info with Beautiful Soup to connect users with potential clients

Extracurriculars

Wat Street — Nov. 2024 – Present
Quantitative Developer — *Waterloo, ON*

- Utilized PyTorch to reach an accuracy level of **96.8%** for neural networks in image classification tasks
- Employed SciPy to create an implied volatility algorithm using the Newton-Raphson method
- Developing Monte-Carlo simulation based method to predict the future prices of European options

Skills

Programming Languages: Python, TypeScript, Ruby, SQL, Java, C#, C++, C, Lisp, Haskell, Bash
Technologies: Rails, Flask, React, Vue, React Native, PyTorch, Pandas, PostgreSQL, MySQL, GraphQL, gRPC, Tailwind
Tools: Git, Claude Code, Cursor, Node, Jupyter Notebook, Unity Engine
